Project Management

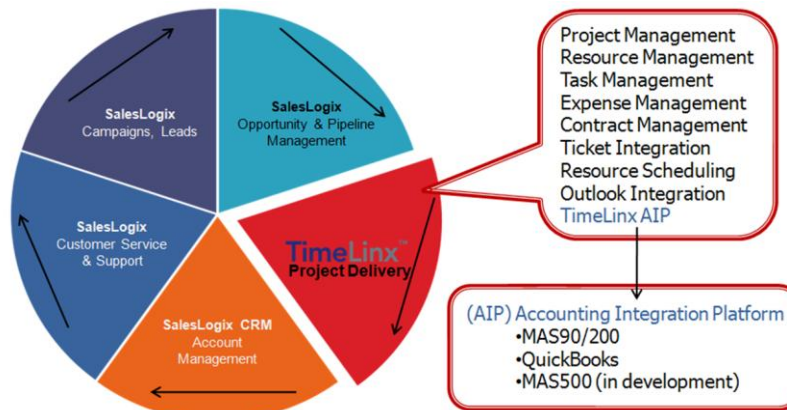

Is everyone on the same page with your Projects?

Your data, your documents – Anywhere, anytime, anyway™

TimeLinx™ delivers tangible results for companies and projects of all sizes -

How much time do you spend on..?
Re-keying data into multiple applications
Maintaining and supporting multiple applications
Analyzing what types of work are profitable and not profitable
Waiting on time and expenses from your staff
Trying to run a profit/loss on a project, if you even can
Determining which project tasks need to be completed
Sorting and preparing data for billing
Entering billing into an accounting system
What's billable and what's not billable for a project
Trying to respond to customers with up-to-date information
Creating a detail project report for customers
How much time 'disappears' and does not get billed?

TimeLinx™ adds important project, resource, time and expense data to your customer relationship information.

TimeLinx™ can replace EIGHT separate and disconnected applications
Microsoft Project
Time entry
Expense entry
Resource scheduling
Help desk (tickets, issues, defects)
Calendar and activities
Customer service and support
Customer asset management
Just add accounting/ERP software to TimeLinx™

TimeLinx™ has a bi-directional connection to Quickbooks, MAS90, MAS200 and MAS500. Other accounting/ERP applications also available.

Browser-based resource availability/scheduling system	
Resource availability by project, time, skill set, department, team	
Task Management/assignments to individuals and departments	
Scheduling within the SalesLogix calendar	
Attendance tracking for resource utilization and realization analysis	
Automated resource alerts	

The TimeLinx™ system works directly inside of the award winning customer relationship management application, Sage SalesLogix, rather than using another outside program that needs to be integrated. Within the familiar, comfortable and user-friendly SalesLogix interface, TimeLinx™ lets your entire organization have full visibility into customer projects and services rather than having this information only available within the accounting system and limited to select staff. On an up-to-the minute basis, your employees know the status of customer work that has been sold, and your support staff and project managers have the full-details at their fingertips to support the customers and the implementation staff.

Features and modules include network and web timesheets, projects tracking, resource management, milestone and task analysis, expense management, attendance management, SalesLogix calendar integration, Microsoft Project synchronization, and integrated QuickBooks®, MAS90, MAS200 and MAS500 synchronization.

At Total Systems, Inc., our focus has always been on helping you to succeed by providing you with the best project and resource management solutions possible. Our solutions are aligned with your business and flexibility in mind so that you can be sure you are getting the best combination of functionality to meet the challenges unique to your industry and projects.
